

Instructors: Adding in-course labs to your course

In-course labs provide learners with hands-on experiences, allowing them to apply course concepts directly, build confidence, and gain job readiness. This article provides an overview of the in-course labs feature and how to add it to your course.

If you're participating in [Udemy's Instructor GenAI Program \(https://support.udemy.com/hc/articles/2491224779995\)](https://support.udemy.com/hc/articles/2491224779995), learners will also have the option to use the Udemy AI Assistant feature, AI task review, to generate feedback on their task solution. See [more information on the AI task review feature for learners \(https://support.udemy.com/hc/articles/36212876902679\)](https://support.udemy.com/hc/articles/36212876902679).

- Visit our Teaching Center for [frequently asked questions about in-course labs \(https://teach.udemy.com/in-course-labs-frequently-asked-questions/\)](https://teach.udemy.com/in-course-labs-frequently-asked-questions/).

What are in-course labs?

In-course labs are a curriculum item that allows learners to practice technical skills in real environments called workspaces. In-course labs enable learners to practice skills in real workspaces without leaving your course. By engaging actively with your content, learners can improve retention and learning outcomes.

For more examples and best practices, [review our Teaching Center article. \(https://teach.udemy.com/how-to-create-labs-for-your-course/\)](https://teach.udemy.com/how-to-create-labs-for-your-course/)

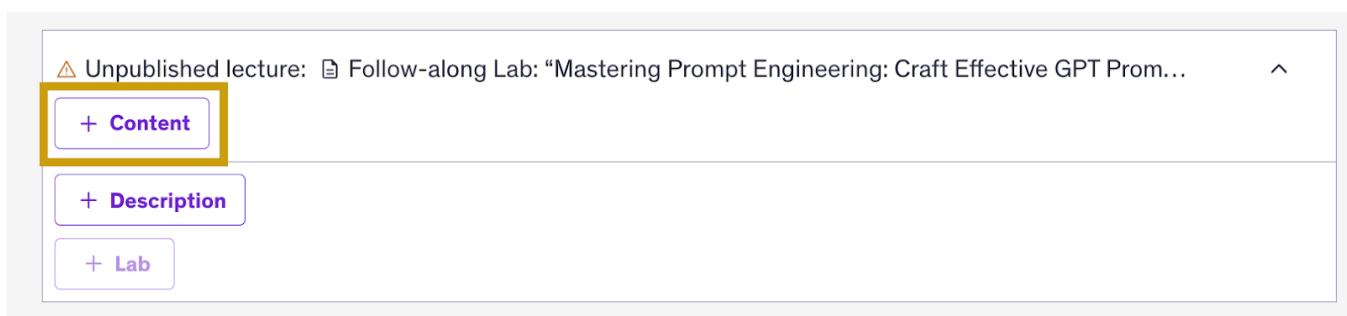

How to access in-course labs

1. Navigate to the **Curriculum** page (<https://support.udemy.com/hc/articles/4413994712471>) of your course.
2. Within a section, click **+Curriculum item** and then select **Lecture With Lab**.

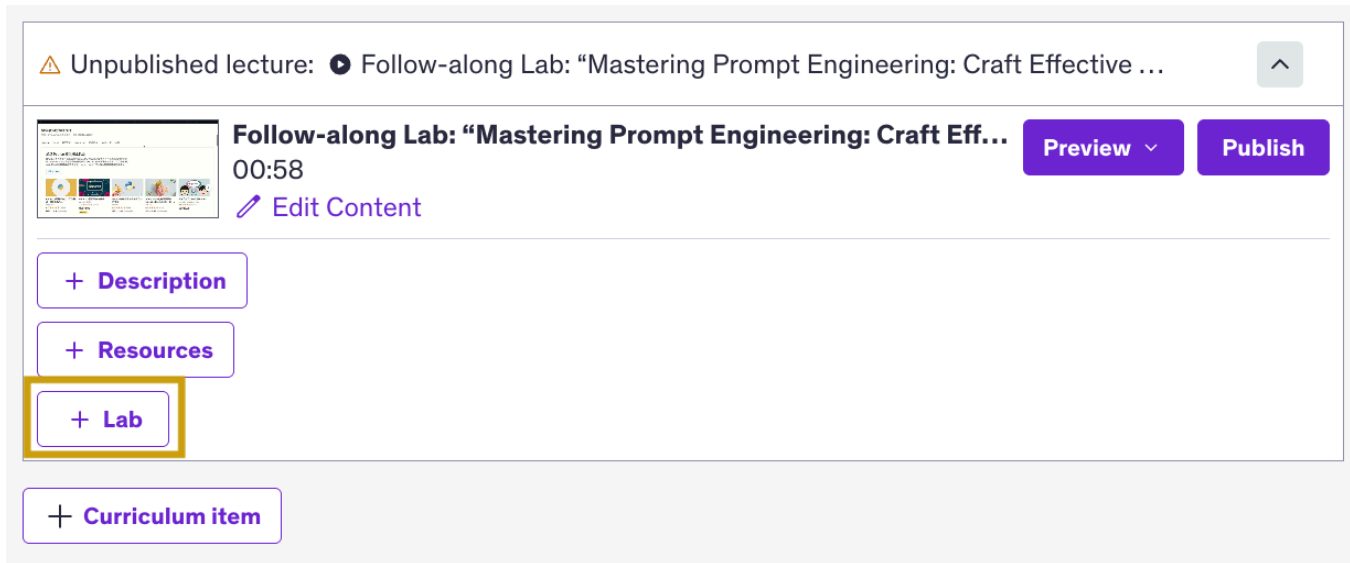

3. Click on **+Content** and add a video to your course.

Note: In-course labs can be added to any lecture in a draft course and any unpublished lectures in an already published course.

4. After your video processing is complete, click on the **+Lab** button to open the Lab Editor.

How to create an in-course lab

After accessing the Lab editor, follow the instructions below.

- Review our [Teaching Center article \(https://teach.udemy.com/how-to-create-labs-for-your-course/\)](https://teach.udemy.com/how-to-create-labs-for-your-course/) for examples and best practices on creating your in-course lab title.
- Begin planning your lab by selecting your lab workspace from one of the available options. Some of the workspaces available include:
 - [AWS - Udemv AWS In Curriculum Template \(https://www.udemy.com/developers/labs/aws/\)](https://www.udemy.com/developers/labs/aws/)
 - [Azure \(https://www.udemy.com/developers/labs/azure/\)](https://www.udemy.com/developers/labs/azure/)
 - [Azure Open AI \(https://www.udemy.com/developers/labs/azure-foundry?lab_type=in_curriculum\)](https://www.udemy.com/developers/labs/azure-foundry?lab_type=in_curriculum)
 - [DataScience - Jupyterlab 4 \(https://www.udemy.com/developers/labs/jupyterlab4\)](https://www.udemy.com/developers/labs/jupyterlab4)
 - [Data Science - PhpMyAdmin/SQL \(https://www.udemy.com/developers/labs/mysql-phpmyadmin\)](https://www.udemy.com/developers/labs/mysql-phpmyadmin)
 - [DataScience & Web - Python-3.13 cli \(https://www.udemy.com/developers/labs/python3_13-cli\)](https://www.udemy.com/developers/labs/python3_13-cli)
 - [DevOps - Linux \(shell scripting\) \(https://www.udemy.com/developers/labs/linux\)](https://www.udemy.com/developers/labs/linux)
 - [Web - Java21 cli \(https://www.udemy.com/developers/labs/java21-cli\)](https://www.udemy.com/developers/labs/java21-cli)

Note:

- While Udemv workspaces are available for Personal Plan and Udemv Business Pro subscribers, other learners may need to use their own personal environments.
- If you wish, download and customize starter code for the lab. Next, select the applicable file and upload it to the lab (optional). This is what learners will see once they launch the workspace associated with the lab.
 - Review our <https://www.udemy.com/developers/labs/intro> <https://www.udemy.com/developers/labs/intro> <https://www.udemy.com/developers/labs/intro>.

Plan lab

Create tasks

Publish lab

Save draft

Preview

Publish

Step 1: Select workspace & review documentation

Select the workspace that will be compatible with your lab content. This is what students will use to attempt and complete the steps of the lab.

Vertical

Select option

Workspace

Select option

Step 2: Download & customize your starter code (optional)

Download the starter code associated with your selected vertical and template below. Open the file and customize it to suit the needs of your learners in the lab.

Download

Step 3: Upload starter code (optional)

This is what students will see once they launch the workspace associated with the lab. It should reflect the point in the project in which they will start to work on. Note that each workspace has its own requirements and limitations.

Important: Please review your starter code and the instructions on your [workspace documentation](#) before uploading as your workspace will not launch if there are errors.

No file selected

Select File

Submit a unique file in .zip format, containing files that will be the starter point for learners in the workspace. Files must be under 40MB.

Continue to tasks →

3. Add tasks to break your lab into manageable steps. Add a task title and timestamp, or the exact second in your lab video when each task begins.

- You can also attach any task resources, including datasets, images, mockups, or configuration files.

Note: For eligible labs, the task title and description will be used to inform the UdeMy AI Assistant's response for AI task reviews. We recommend adding a description to help inform the AI task review.

Publish

Create tasks

You can add tasks to your lab to provide structure to your practice experience. You can use tasks however you see fit, but you must add at least one task to your lab.

Each task must include a title that indicates what students will need to accomplish before moving on to the next part of the project.

Note: You can optionally add a timestamp of reference for the lab, and also add extra content such as reference code, a task instruction and readme.

+ Add another task

Continue to publish →

4. Enter the estimated duration of the lab. After finalizing your lab, you can use the **Preview** function or click **Publish**.
