Make the knowledge problem concrete before showing the Foundry IQ configuration.

- Classic RAG remains valid; agentic retrieval is not automatically better for every question.
- Multi-source enterprise questions benefit from planning and source selection.
- Grounding means verifiable retrieval; merely placing context tokens in a prompt is weaker evidence.
- Citations must support the exact claim, not just point to a related document.
- Stronger retrieval increases the need for evaluation, not decreases it.

Teach Foundry IQ as a managed knowledge layer rather than “upload files to an agent.”

- A knowledge base can serve multiple agents and multiple sources.
- Foundry IQ is built on Azure AI Search agentic retrieval.
- Permission enforcement varies by source; do not promise automatic document-level security for unsupported sources.
- Restricted content should never be retrieved into model context and then “hidden” afterward.
- A citation is useful only when the learner can open it and verify the supporting evidence.
